PREFACE

Part I of this series of reports on SCIENTIFIC AND TECHNOLOGICAL SOCIETIES OF JAPAN published in October 1947, covered the three leading national scientific societies of Japan: The Imperial Academy, The National Research Council, and the Japanese Society for the Promotion of Science. Since the release of that publication, the reorganization of the leading national scientific societies of Japan has modified the nature of these organizations. A summary of the changes appears on pages iii and iv.

This report, Part II, presents a summary of information on Japanese professional societies in the following fields of the natural sciences: the biological sciences, chemistry, the earth sciences, physics, mathematics and astronomy. A brief sketch of the purpose, history, membership, activities and publications of each society is given, assembled in the manner shown on the sample outline, page v and vi.

During the war years, the activities of many of the societies ceased. Publication of journals was largely discontinued, due to paper scarcity and the destruction of printing facilities. The societies have been and are presently, in a period of reactivation or reorganization.

Particular attention has been devoted to publications, including war-time and current publication schedules of value to librarians and research analysts.

THE REORGANIZATION OF THE NATIONAL

SCIENTIFIC SOCIETIES IN JAPAN

Reorganization of Japanese national scientific societies has occurred following the recent passage of two laws by the Japanese Government: Law No. 121 of 1948, called the Science Council of Japan Law, was passed on 5 July 1948; and Law No. 253 of 1948, called the Scientific and Technical Administration Commission Law, was passed on 11 December 1948.

The Science Council of Japan Law abolished the old National Research Council of Japan on 20 January 1949, and the Imperial Academy of Sciences of Japan will become The National Academy of Japan, solely an honorary body under the Council. The 210 members of the Council were elected from among the qualified scientists of the country. The Council has seven divisions, as follows:

The First Division	(Literature, Philosophy and History)
The Second Division	(Law and Politics)
The Third Division	(Economics and Commerce)
The Fourth Division	(Fundamental Science)
The Fifth Division	(Engineering)
The Sixth Division	(Agriculture)
The Seventh Division	(Medicine, Dentistry and Pharmacology)

The law states that the Council is established on the conviction that science provides the basis of a cultural country and by the joint will of Japanese scientists aims to contribute to peaceful rehabilitation of Japan and promotion of the welfare of human society as well as the advancement of world science, in co-operative relations with academic societies of foreign countries.

The Council is the representative body of scientists of Japan, national and international and shall place itself available to the government for advice on the following:

1. Policies on the compilation of budgets concerning the expenditures of research institutes and laboratories under the jurisdiction of the government.
2. Compilation of budgets for and distribution of government grants and subsidies in order to help scientific researches and experiments or to promote science in general.
3. Methods for promotion of science and advancement of technology.
4. Measures for the practical application of the results of scientific research.

5. Training of scientific researchers.
6. Type of research projects to be conducted and the coordination of research.
7. Action as the national center for liaison and communication with international scientific organizations.
8. Measures for the exchange of scientific and technological publications with foreign countries.
9. Measures to send scholars abroad.
10. Measures to send delegates to international conferences.
11. Measures to award prizes and bestow honors for outstanding achievements in science and technology.

The Scientific and Technical Administration Commission Law establishes a scientific commission within the office of the Prime Minister which will keep the Prime Minister informed as to:

1. Measures necessary for consideration and implementation of the recommendations made by the Science Council of Japan.
2. Selection of matters which are to be referred to the Science Council for consultation by the government.
3. Method of execution of international enterprises concerning science and technology which should be carried out by the government.
4. Liaison and coordination of matters relating to science and technology which are under the jurisdiction of the government administrative agencies.

The Commission will not exceed 26 in number and shall have representatives from all technical Ministries and from the Science Council of Japan. The Scientific and Technical Administration Commission and the Science Council of Japan were inaugurated on 20 January 1949.

The Japan Society for the Promotion of Science, formerly subsidized by the government, will operate as a private organization.

- b. Membership Requirements: Only an interest in anthropology
and ability to pay fees.
- c. Membership File: It can be found in each December issue.

6. Brief History:

This society was founded in 1886 by Shogoro TSUBOI, at that time an undergraduate at Tokyo University. TSUBOI later became the first head of the Anthropological Institute (Department) of Tokyo University. The original name of the group was Tokyo Anthropological Society (Tokyo Jinrui Gakkai) but in 1939 changed to the present name motivated, it is claimed, by the need of greater ease in communication abroad. Principal activity of society is the holding of monthly and annual lecture meetings at which time results of research are reported.

7. Officers:

| | KOMI, Kazuchika | Asst. Professor Archeological Department, Tokyo University |
| | YAMATA, Ichiro | Non-regular staff member, National Museum |

f. Other Officials:

About 80 of the membership are called "Councillors". These then form a board of councillors. Because of the requirements of election these councillors are generally professors and asst. professors of the anthropological departments of the major universities.

- g. Officers are selected by nomination by board of councillors, theoretically from membership-at-large, but actually limited to members of board. Election to board is by membership-at-large at annual meetings and is for outstanding contributions to anthropology.

8. Activities:

a. Meetings

- (1) Monthly and annually
- (2) Attendance: 70-80 for monthly meetings, 100 for annual meeting

Society was founded in 1878 as the Tokyo Chemical Society. In February, 1898 the Society of Chemical Industry of Japan was founded. This second society was incorporated in February, 1926. In January, 1948 the two societies amalgamated under the title Chemical Society of Japan. There are five branches, one each at Tokyo (Kanto Branch), Osaka (Kinki Branch), Fukuoka (Kyushu Branch), Nagoya (Tokai Branch), and Sendai (Tohoku). Since amalgamation the society has occupied the building owned by the society of Chemical Industry.

7. Officers:

- a. Pres: ICHIKAWA, Ichiro President, Nissan Chemical Industry Co.
b. V-Pres: HIZUSHIMA, San-ichiro Professor of Chemistry, Tokyo University
c. Secty: HATA, Kazuo Asst Professor of Organic Chemistry, Tokyo University
d. Treas: TACHIBANA, Taro Asst Professor of Chemistry, Tokyo University
e. Board of Direc: The above officers function as the board of directors.
f. Other Officials: There are twenty councillors and two inspectors.
g. Officers are elected for a term of one year by general membership.

8. Activities:

- a. Meetings
(1) Meetings are held locally monthly, and nationally yearly. The local monthly meetings are rotated among universities, institutes, and companies. The national yearly meetings are rotated among the large universities.
(2) Attendance: Local meeting attendance varies widely with 100 as an average. National meetings 400-500.
(3) Location: To read research papers and hear lectures on new developments
b. Inspection of chemical factories, liaison agency for visiting chemists in Japan.

4. Purpose:

"The science of meteorology is of great interest in itself but is, except for experts, too difficult to understand. However, the science has large fields of direct application to our daily lives. Thus, believing the applied science is more important than the pure science, this society will publish useful papers for the general public and disseminate widely meteorological information."

b. Membership Requirements: Anyone who specializes in the field of mathematics may join.

c. Membership File: Kept by the secretary in the main office.

6. Brief History:

This society was formerly a part of the Physico-Mathematical Society of Japan. In 1946 the Physico-Mathematical Society split into two parts, since it had become too bulky and there was too much divergence of interest among members. (See Physical Society of Japan).

7. Officers:

d. Treas:	KAWATA, Tatsuo	Prof. of Mathematics, Tokyo Univ.
	IWASAWA, Kenkichi	Lecturer of Mathematics, Tokyo University

e. Board of Direc:

There are twenty seven councillors. These councillors are chosen to represent the membership of the society on two bases, (1) by geographical distribution corresponding to the branches of the society (there are 8 branches) and (2) by subject matter divisions of the society (Theory of Functions), (Theory of Real Functions), (Topological Analysis), (Algebra),

7. Officers: (Cont'd)

e. Board of Direc:

(Geometry), (Statistics), (Applied Mathematics), (Foundations of Mathematics). Each branch is allowed one member and each sub-division two members. However, a mathematician may represent both a branch and a sub-division which accounts for the fewer than 32 members possible on the board.

f. Other Officials: None

- g. Anyone wishing to serve as a committee member may give their name to the incumbent committee. The branches of the society may also recommend candidates (in both capacities). The list of recommended candidates and volunteers is then circulated to all members who can add or strike out names. Upon the return of the lists to the committee any name which has been added by more than 10% of the membership is added to the final list and any name struck out by 10% of membership is removed from list. The final list is then circulated and the committee elected. The committee elects the president, who then nominates the secretary and two treasurers from the members of the committee.

8. Activities:

a. Meetings

- (1) Two general meetings are held yearly Local branches meet 4-6 times yearly
(2) Attendance: 200-300 at general meetings
(3) Location: Meetings are held in Tokyo, generally
(4) To discuss mathematics

6. Brief History:

In 1877 a society of mathematicians was established in Tokyo. This society was enlarged in 1884 to include physicists and astronomers and the name Tokyo Mathematics-Physical Society adopted. The name was changed to Japan Mathematics-Physical Society in 1919. By 1946 the society had grown so large and the interests of the members so diverse that the society was split and the present name adopted for this part (see Mathematical Society of Japan) of two resulting societies. There are branches of the society in Sapporo, Sendai, Tokyo, Nagoya, Kyoto, Osaka, Fukuoka.
